EVERCLEAR POOLS AND SPAS

WELCOME!

Thinking about a pool? You're in the right place.

A pool is a big decision, and there is plenty to consider. This guide walks you through five important areas to think about before buying a fibreglass pool, so you can plan with confidence and ask the right questions.

At Everclear Pools and Spas, we help South Australian families work through pool size, placement, equipment and the practical details that turn a backyard idea into a plan.

SAVE THIS GUIDE

Use it to compare options and prepare for your pool consultation.

WHAT'S INSIDE

- 01 Choosing a quality pool
- 02 Choosing the right pool builder
- 03 Planning for heating
- 04 Choosing your water system
- 05 Running costs & smart equipment

CHOOSING A QUALITY POOL

INVEST IN A POOL THAT LASTS

The pool shell is the foundation of your project. Look beyond colour and shape and ask what sits behind the product.

POOL CONSTRUCTION & FINISH

Ask how the fibreglass pool is manufactured, what quality controls are used and what information is available about the surface finish.

WARRANTIES

Read the warranty rather than relying only on the headline. Check what is covered, for how long, conditions you must meet, and whether separate warranties apply.

STANDARDS & INSTALLATION

Ask how the pool and installation will comply with relevant Australian requirements and local approvals. Site conditions can affect engineering, access and installation.

QUALITY FIRST. A beautiful pool should be backed by a product and process you trust.

THE EVERCLEAR POINT OF DIFFERENCE

It's not just about choosing a pool. It's about choosing what comes with it.

BETTER INVESTMENT

Why the pool shell matters

- Quality fibreglass construction designed for strength and durability.
- A long-term investment deserves quality from the beginning.
- Product and manufacturer warranties provide added peace of mind.

BETTER EFFICIENCY

Smarter equipment. Easier ownership.

- Energy-efficient equipment options.
- Variable-speed pump, heating and thermal-cover options.
- Automation and smart pool technology available.

BETTER COLOUR

A finish designed to stay beautiful.

- Premium fibreglass pool finishes.
- Colour-protection technology designed to help maintain appearance.
- A colour range to complement different homes and backyard styles.

Quality products. Personal service. Ongoing support. That's the Everclear difference.

CHOOSING THE RIGHT POOL BUILDER

EXPERIENCE MAKES A DIFFERENCE

A great pool is only part of the experience. The people planning, installing and supporting it matter too.

REVIEWS & REPUTATION

Read recent reviews across more than one source and look for patterns in communication, workmanship, problem solving and after-sales support - not just the star rating.

COMPARE LIKE FOR LIKE

The lowest quote is not automatically the best value. Ask each builder to explain exactly what is included and excluded. Access, excavation, electrical work, approvals, fencing, landscaping and upgrades can affect cost.

COMMUNICATION & AFTER-SALES

Ask who your contacts will be through sales, scheduling, installation and handover. Also consider whether the business can help after installation with water testing, servicing, equipment and ongoing pool care.

GOOD QUESTION: "If something goes wrong after my pool is installed, who do I contact?"

PLANNING FOR HEATING

GET MORE SWIM DAYS EACH YEAR

If you want to use your pool beyond the hottest part of summer, think about heating while you are planning the project.

HEAT PUMPS

A heat pump can help extend your swimming season by transferring heat from the surrounding air into the pool water. The right unit depends on pool size, desired temperature, location and use.

POOL BLANKETS

A correctly used pool blanket can reduce evaporation and help retain heat. It can also reduce debris entering the water.

PLAN THE EQUIPMENT AREA

Heating equipment needs suitable space, airflow, plumbing and electrical planning. Discuss it early so the equipment layout works with your backyard design.

MORE SWIM DAYS. MORE TIME ENJOYING YOUR BACKYARD.

CHOOSING YOUR WATER SYSTEM

FIND WHAT WORKS FOR YOU

Water treatment keeps pool water sanitised and suitable for swimming. Different systems suit different preferences, equipment and maintenance routines.

MINERAL SYSTEMS

Mineral pool systems use formulated mineral salts alongside a sanitation process. The exact composition and operation varies by product, so compare the specific system rather than assuming all mineral pools are the same.

SALT / CHLORINATION OPTIONS

Many residential pools use a salt chlorination system to generate chlorine for sanitation. Equipment features, automation and recommended salt levels vary, so ask what is included.

WATER BALANCE

Whichever system you choose, regular water testing and correct water balance remain important for swimmer comfort, water clarity and protecting pool surfaces and equipment.

ASK: What ongoing products will I need? How often should I test? What support is available?

The equipment you choose can influence how easy your pool is to manage and how much energy it uses over time.

VARIABLE-SPEED PUMPS

Variable-speed pumps can operate at different speeds depending on the task. When correctly selected and programmed, this can provide more flexibility than operating a pump at one fixed speed.

ROBOTIC CLEANERS

A robotic cleaner can take care of much of the routine floor and wall cleaning. Compare cleaning coverage, filtration, cable or cordless design, warranty and local support.

AUTOMATION

Depending on your equipment, automation can let you manage filtration schedules, heating, lighting and other compatible pool features from a controller or app.

LESS TIME ON MAINTENANCE. MORE TIME MAKING MEMORIES.

READY TO START PLANNING?

Every backyard is different. Our team can help you work through pool size, placement, equipment and the options that suit your home and lifestyle.
